

Idrizovo Website — Prompts

Organized by category: Meta, Frontend, Backend, Logging, AI Feature

[META] Meta / Project Organization

Organize all prompts by category + explore AI translator

organize these prompts in to ways you think is best like these are prompts used for frontend these are for backend and if there is more specif features in those two categories also if you can find out chat about making a AI translator for the idrizovo website that would be nice

Note: This prompt is the reason this document exists. It asked for prompt categorization and sparked the AI translator idea.

[FE] Frontend / UI

Login page

hey i need you to make a login page using talewind it shound be in a form so in the future it can be used in laravle try the deseing out it shound follow a similar patern like this

Note: Tailwind CSS. Form structure reusable in Laravel later.

Vospitac dashboard + Reviewer dashboard

can you make the same deseign for vospitac just for the vospitac keep it the same make a other dashbord for a reviwere witch can only look at mails so there is no need at all does options just one page were he can read reviews

Note: Vospitac: same design as login. Reviewer: single page, read-only mails/complaints.

Homenage fixes — hero image, aktivnosti boxes, e-vesnik flin

hey i need you to fix some stuff keep it the same exepct the stuff i say to change okay first in the main section the picture shond be bigger in the aktivnost section make the boxes bigger only theree at a time shound be shown the animation shound work the same in the e vesnik part it needs to be able to flip between the pages

Note: 3 aktivnosti boxes at a time. Animation stays the same. E-vesnik flips between pages.

E-vesnik bigger + flin on click, aktivnosti hover lift on Y axis

okay make the vesnik bigger also there shound not be a button when you click on the vesntik it shound flip and make it bigger on the aktivnost make it so when you hover over them it transplants on the y axis make it dynamic

Note: No button on vesnik — clicking it flips and enlarges. Aktivnosti hover translates on Y axis dynamically.

[BE] Backend / Laravel

Admin dashboard with roles and test login

could you make a quick dashbord admin page using laravle the admin should be ablt to add aktivnosti e vesnik and novosti i racni izrabotki a other role does the same exepct the admin has the ability too look at the poseti and a finaly role only looks at the one mails/complaints hes the only one that can see that make a quick test login i know the database isnt show yet

Note: 3 roles: Admin (all content + poseti), Vospitac (same minus poseti), Reviewer (mails only). Test login hardcoded, no DB yet.

[LOG] Logging Feature (TXT file — no database)

Admin log panel — track every route interaction

hey i need your help to add a admin feature i want the admin to have a extra panel called log were he can see the logos of the site that means evary route interaction so evry post and get method the post metod shound corespond with the users if like a admin posted it or a vospituvac the get method mabye a ip adress if thats posible if not dont worry about it. How i see it to be done is on evry route and such add that it saves to a txt file then print that txt file on screen for the admin

Note: POST = who did it (admin/vospitac). GET = IP address if possible. Saved to .txt and shown in admin panel.

Log visitor activity and admin/vospitac actions

hey i need you to add a feature were the admin has a page that allows him to see all the logs of the site by logs i mean who entered the site do that if possible by ip if not don't do that feature more importantly make a way to log the doings of admins vospituvacs and such

Note: Who entered the site (by IP if possible) + what admins and vospituvaci did.

Save logs to .txt file only — no database

why are you doing it trew a migration just save it stuff in a txt file? clients dont want tbat stuff to be done in a database

Note: Client explicitly does not want logs in a database. Plain .txt file only.

Make log messages human-readable in Macedonian

this is good but its not very human they wont know what post or get and such mean make it so its human and also it should work in like if an admin puts up a new sopstenija and other stuff the admin and vospituvac can do

change the langue they wont know what post admin.annoucments.store is make it so like prikaci
sopstenje stuff like that

Note: Replace HTTP method names with plain Macedonian descriptions. E.g. '██████████ ██████████' instead of 'POST admin.announcements.store'.

[AI] AI Feature — Translator

AI-powered MK/EN language toggle

hey can you add a feature were theres a button or something that translates the site like mk to en and en to mk would be nice if it could do it automaticly trew using Ai the novosti aktivnosti and vesnik shound be translated too

Note: Toggle button for MK <-> EN. Novosti, aktivnosti and e-vesnik content all translated. AI-powered.
